Art Unit: 1761

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over applicants' admission of the prior art, as further evidenced by Mani (5,234,705) and Goglanion (4,557,979), further in view of Ruiz (4,873,099), Warnock (5,326,577), Lynn (2,892,719) and Van Horne (4,205,091) or vice versa, i.e. Ruiz, Warnock, Lynn and Van Horne in view of applicants' admission of the prior art, Mani, and Goglanian.

Applicant's admission of the prior art teaches it was known to package pocket bread in packages. Both Mani and Goglanian can be relied on as further evidence of pocket bread. Claim 1 differs from applicants' admission of the prior art in that after baking, the pocket bread is cut and the pocket bread is nested one inside the other. As evidenced by Ruiz, Warnock, Lynn and Van Horne, it is well established in the art to stack edible food items, that are to be used, in effect, as edible containers, so that they are nested, one within the other. This is not only common in the food art, but in packaging any products that are conducive to being stacked in a nested array. Paper cups and coffee filters are non-edible examples of nestable stacking of container-like articles. To modify applicants' admission of the prior art and thus stack pocket breads, which are intended to be opened (see e.g. Mani and Goglanian) would therefore have been obvious. Similarly, once it was known to nestably stack edible container-like

Art Unit: 1761

articles and specifically edible, container-like articles, the particular conventional edible, container-like article one chooses to nestably stack is seen to have been obvious. That is, it would have been obvious to modify the combination and nestably stack pocket bread.

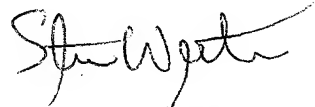

The remainder of the references cited on the USPTO 892 form are cited as pertinent art.
